

Ghany Widito Baskoro

Industrial Engineering & Technology Management

While I worked as Management Development Program, I took Masters degree in Technology Management (M.M.) and graduated in February 2022. Able to perform business operational simulations and do a feasibility study and financial feasibility. Plunged into the IT industry as a Product Owner, understanding the SDLC concept, and managing front-end services apps and ERP Financial Module applications. Accustomed to brainstorming and discussion in solving problems using data analysis tools. My biggest fear is facing a learning decline, doing repetitive work for long periods of time that can reduce insight of mindset and point of view.
